Available for Co-op: Fall 2026

EDUCATION

Northeastern University **Sep 2023 - May 2027 (Expected)**
Khoury College of Computer Sciences *Boston, MA*
Candidate for Bachelor of Science in Computer Science, Concentration in Artificial Intelligence

- **Relevant Coursework:** Object Oriented Design, Artificial Intelligence, Machine Learning and Data Mining, Algorithms and Data, Computer Systems, Database Design, Data Visualisation
- **Activities and Societies:** Northeastern Electric Racing, Oasis Project Series, Undergraduate Research Club, HackBeanpot
- **Awards and Honors:** Dean's List

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, TypeScript, JavaScript, C, MySQL, Solidity
- **Frameworks/Libraries:** React.js, Next.js, Express.js, Spring Boot, JUnit, PyTorch, NumPy, Pandas, Scikit-learn, Matplotlib, Streamlit
- **Developer Tools:** Node.js, Git, Docker, Maven, IntelliJ, VS Code, Jupyter Notebooks, Supabase, Netlify
- **Concepts:** REST APIs, Full-Stack Development, MVC Architecture, OOP, Relational Databases, Agile Development

RELEVANT EXPERIENCE

Fidelity Investments **Jun 2026 - Aug 2026**
Incoming Software Engineering Intern *Merrimack, NH*

Harvard Law School **Jul 2025 - Dec 2025**
IT Services Co-op *Cambridge, MA*

- Provided technical support for **2,500+ faculty, staff, and students**, resolving software, hardware, and network issues across Windows, macOS, and Linux environments.
- Configured and deployed **~10 Windows and macOS devices weekly** using Intune, Jamf, and LDAP-based provisioning.
- Maintained **45+ AV systems** through scheduled preventive maintenance, minimizing downtime for classrooms and event spaces.

Khoury College of Computer Sciences **Sep 2024 - Apr 2025**
Teaching Assistant CS2500/2501 *Boston, MA*

- Supported instruction for **1,000+ students** across two semesters, collaborating with 40+ faculty and TAs on course material.
- Led weekly lab sessions for **40+ students** covering linked lists, recursion, list abstraction, trees, and functional programming.
- Evaluated **10,000+ lines** of student code weekly, providing detailed feedback on correctness and design.

PROJECTS

Simulant | Python, FastAPI, OpenAI API, Anthropic API, Gemini API, DeepSeek API, xAI API, Ollama **Mar 2026 - Present**

- Built a **provider-agnostic adapter layer** for 6 LLM providers, with rate limiting, exponential backoff, and reproducible hashed configs to support consistent simulation runs and exact replication.
- Developed a **multi-agent accusation system** with credibility scoring, democratic conviction logic, and structured JSONL logging to track agent state, decisions, and outcomes across 70+ simulation runs.
- Analyzed simulation results to identify model-specific deception patterns, coalition behavior, and reasoning differences in adversarial multi-agent environments.

CryptoJar | Java, Spring Boot, Spring Security, JPA, React, Next, TypeScript, Mockito, Docker **Feb 2026 - Present**

- Built a **full-stack payment platform** converting USD invoices into blockchain payments across **6 chains (BTC, LTC, ETH, SOL, AVAX, XLM)** utilizing the CoinGecko API**.**
- Developed **RESTful backend APIs** for invoice management, wallet routing, authentication, and role-based access control (Owner, Admin, User); built **internal admin tooling** for invoice approvals, user moderation, and account management.
- Implemented **payment reconciliation pipelines** to classify invoices as pending, paid, underpaid, or expired via scheduled backend services.
- Added **end-to-end encrypted messaging** via Web Crypto API with **live chat updates** using server-sent events.
